APPENDIX A - GLOSSARY OF TERMS

### 1 Introduction

Muller Acoustic Consulting Pty Ltd (MAC) has been commissioned by Holcim (Australia) Pty Ltd (Holcim) to complete a Noise Monitoring Assessment (NMA) for the quarterly period ending June 2022 for Teven Quarry (the 'quarry'), Teven, NSW.

The monitoring has been conducted in accordance with the Teven Noise Management Plan (NMP) and in general accordance with relevant conditions outlined in the Development Consent (ref: SSD 6422) at five representative monitoring locations. This assessment has been undertaken during Quarter 2, ending June 2022 and forms part of the noise monitoring program for the quarry.

The assessment has been conducted in accordance with the following documents:

- NSW Environment Protection Authority (EPA), Noise Policy for Industry (NPI), 2017;
- NSW Environment Protection Authority (EPA), Environmental Protection Licence (EPL 3293);
- NSW Department of Planning and Environment, Development Consent (SSD 6422), 2015;
- Teven Quarry Noise Management Plan Revision 1, 4 May 2016 (EMM); and
- Australian Standard AS 1055:2018 Acoustics Description and measurement of environmental noise.

A glossary of terms, definitions and abbreviations used in this report is provided in Appendix A.

# 2 Noise Criteria

Schedule 3 of the Teven Quarry Development Consent (2015) outlines the applicable noise criteria for residential receivers surrounding the quarry site.

Table 1 reproduces relevant criteria for each of the receivers as outlined in the quarry's Development Consent.

| Table 1 Noise Criteria               |                   |                 |  |  |  |  |  |
|--------------------------------------|-------------------|-----------------|--|--|--|--|--|
|                                      | Quarry Operations |                 |  |  |  |  |  |
| Location <sup>1</sup> ——             | Period: Day       | Period: Evening |  |  |  |  |  |
| Location                             | 7am – 6pm         | 6pm – 10pm      |  |  |  |  |  |
|                                      | dB LAeq(15min)    | dB LAeq(15min)  |  |  |  |  |  |
| R3, R4, R13, R15, R16, R17, R18, R20 | 38                | 35              |  |  |  |  |  |
| All other receivers                  | 37                | 35              |  |  |  |  |  |

Note 1: Receiver locations are shown in Figure 1.

# 3 Methodology

### 3.1 Locality

The quarry is located in Teven, NSW approximately 7km west of Ballina, NSW. Receivers in the locality surrounding the quarry are primarily rural residential. The surroundings of the quarry are primarily rural. The monitoring locations with respect to the quarry are presented in the locality plan shown in Figure 1.

#### 3.2 Noise Monitoring Locations

Five monitoring locations have been selected as part of the NMA in accordance with the NMP. The selected monitoring locations are presented in Table 2 along with the noise sensitive receivers they represent.

| Table 2 Monitoring Locations (MGA56 Coordinates) |                  |            |             |  |  |  |  |  |
|--------------------------------------------------|------------------|------------|-------------|--|--|--|--|--|
| Location                                         | Nearest Receiver | Easting, m | Northing, m |  |  |  |  |  |
| NM1                                              | R7               | 546737     | 6809918     |  |  |  |  |  |
| NM2                                              | R3/R4            | 548892     | 6810285     |  |  |  |  |  |
| NM3                                              | R2               | 547781     | 6808991     |  |  |  |  |  |
| NM4                                              | R10              | 547576     | 6810379     |  |  |  |  |  |
| NM5                                              | R14              | 548100     | 6810792     |  |  |  |  |  |

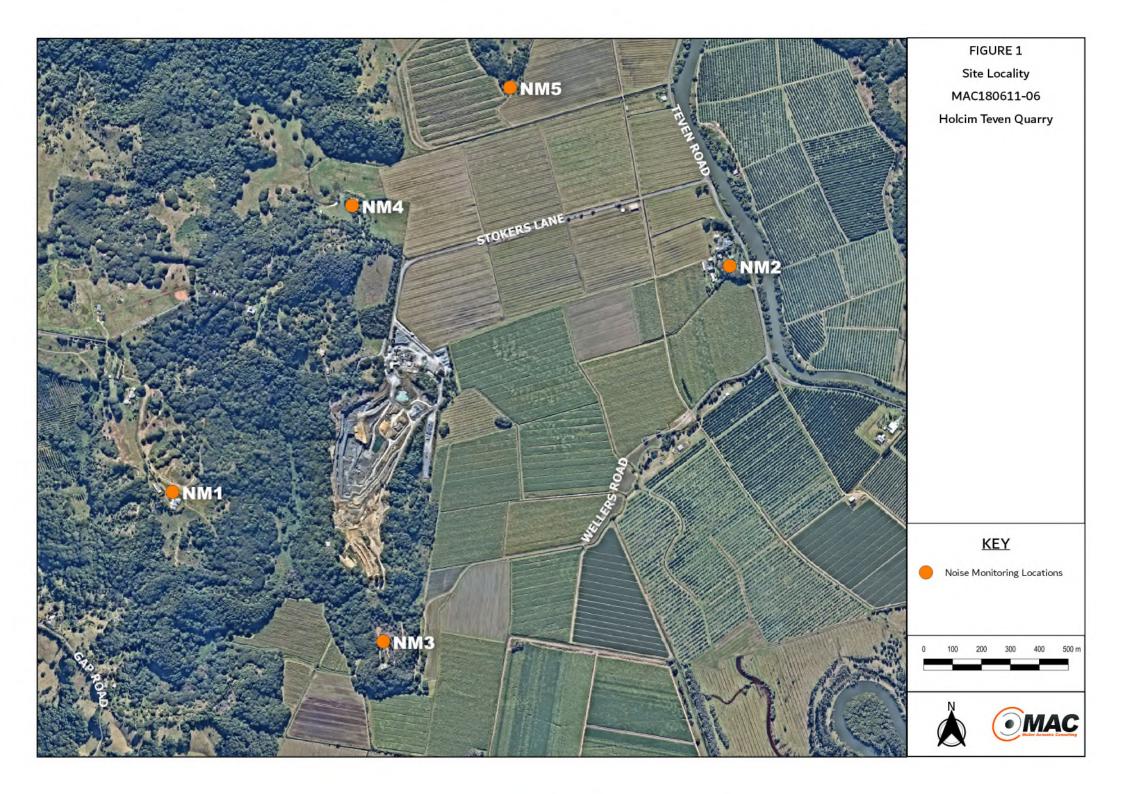

#### 3.3 Assessment Methodology

Attended noise surveys were conducted in general accordance with the procedures described in Australian Standard AS 1055:2018, "Acoustics - Description and Measurement of Environmental Noise and the NPI. Measurements were carried out using a Svantek Type 1, 971 noise analyser on Wednesday 18 May 2022 and Thursday 19 May 2022. Acoustic instrumentation used carries current NATA calibration and complies with AS/NZS IEC 61672.1-2019-Electroacoustics - Sound level meters - Specifications. Calibration of all instrumentation was checked prior to and following measurements. Drift in calibration did not exceed ±0.5dBA.

As per the Noise Management Plan, two daytime measurements were conducted at each monitoring location. It is noted that the quarry was not operating during the evening period, however two measurements were conducted at each monitoring location as per the requirements of the EPL.

Measurements were of 15 minutes in duration and where possible, throughout each survey the operator quantified the contribution of each significant noise source. Extraneous noise sources were excluded from the analysis to determine the LAeq(15min) noise contribution for comparison against the relevant criteria. Where the quarry was inaudible, the contribution is estimated to be at least 10dB below the ambient noise level.

# 4 Results

# 4.1 Assessment Results - Location NM1

The monitored noise level contributions and observed meteorological conditions for each day and evening survey period at Location NM1 are presented in Table 3.

#### 5 Discussion

#### 5.1 Discussion of Results - Location NM1

Quarry noise emissions were inaudible during the daytime measurements conducted on Thursday 19 May 2022. Quarry noise contributions were estimated to satisfy the daytime noise limits. The quarry was not operational during the evening period which satisfied the relevant evening noise limits however background measurements were completed as per the requirements of the EPL.

Non quarry noise sources observed during the measurements included insects, birds, traffic, wind in trees, operator noise and aircraft.

#### 5.2 Discussion of Results - Location NM2

Quarry noise emissions were audible during the daytime measurements conducted on Thursday 19 May 2022. Quarry noise contributions were estimated to satisfy the daytime noise limits. The quarry was not operational during the evening period which satisfied the relevant evening noise limits however background measurements were completed as per the requirements of the EPL.

Quarry noise sources observed during the measurements included the processing activities. Non quarry noise sources observed during the measurements included birds, traffic, insects, local residential noise and dog bark.

#### 5.3 Discussion of Results - Location NM3

Quarry noise emissions were inaudible during the daytime measurements conducted on Thursday 19 May 2022 Quarry noise contributions were estimated to be less than 35dBA for both measurements and satisfy the daytime noise limits. The quarry was not operational during the evening period which satisfied the relevant evening noise limits however background measurements were completed as per the requirements of the EPL.

Non quarry noise sources observed during the measurements included insects, birds, traffic and aircraft.

#### 5.4 Discussion of Results - Location NM4

Quarry noise emissions were audible during the daytime noise measurements conducted on Thursday 19 May 2022. Quarry noise contributions were estimated between 36dBA and 37dBA for both measurements and therefore satisfied the daytime noise limits.

It was observed that the stockpiles to the north of the processing area were significantly higher compared to the previous survey where compliance was not achieved.

The quarry was not operational during the evening period which satisfied the relevant evening noise limits however background measurements were completed as per the requirements of the EPL.

Quarry noise sources observed during the measurements included processing activities. Non quarry noise sources included traffic, birds, insects and aircraft.

#### 5.5 Discussion of Results - Location NM5

Quarry noise emissions were audible during the daytime measurements conducted on Thursday 19 May 2022. Quarry noise contributions were estimated to be less than 35dBA for both measurements and satisfy the daytime noise limits. The quarry was not operational during the evening period which satisfied the relevant evening noise limits however background measurements were completed as per the requirements of the EPL.

It is noted that due to excessive rainfall access to receiver NM5 was not available. An intermediate location on Stokers Lane closer to the quarry was used to complete the assessment.

Non quarry noise sources observed during the measurements included traffic, aircraft, birds and insects.

### 6 Conclusion

Muller Acoustic Consulting Pty Ltd (MAC) has completed a Noise Monitoring Assessment (NMA) on behalf of Holcim (Australia) Pty Ltd at Teven Quarry, Teven, NSW. The assessment was completed to determine the quarry's compliance with the relevant criteria outlined in their Development Consent for the relevant surrounding residential receivers during Quarter 2, ending June 2022.

Attended noise measurements were undertaken on Wednesday 18 May 2022 and Thursday 19 May 2022 at five representative monitoring locations with quarry noise contributions compared against the relevant criteria.

The assessment has identified that noise emissions generated by Teven Quarry were audible on several occasions although complied with relevant criteria.

# Appendix A - Glossary of Terms

Table A1 provides a number of technical terms have been used in this report.

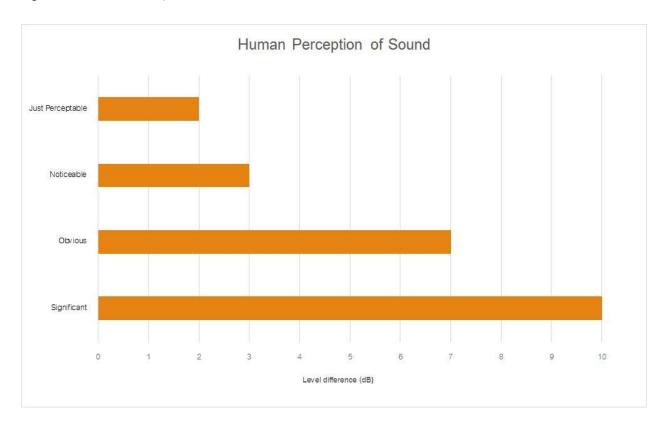

| Term                   | Description                                                                                         |
|------------------------|-----------------------------------------------------------------------------------------------------|
| 1/3 Octave             | Single octave bands divided into three parts                                                        |
| Octave                 | A division of the frequency range into bands, the upper frequency limit of each band being twice    |
|                        | the lower frequency limit.                                                                          |
| ABL                    | Assessment Background Level (ABL) is defined in the NPI as a single figure background level for     |
|                        | each assessment period (day, evening and night). It is the tenth percentile of the measured LA90    |
|                        | statistical noise levels.                                                                           |
| Adverse Weather        | Weather effects that enhance noise (that is, wind and temperature inversions) that occur at a site  |
|                        | for a significant period of time (that is, wind occurring more than 30% of the time in any          |
|                        | assessment period in any season and/or temperature inversions occurring more than 30% of the        |
|                        | nights in winter).                                                                                  |
| Ambient Noise          | The noise associated with a given environment. Typically a composite of sounds from many            |
|                        | sources located both near and far where no particular sound is dominant.                            |
| A Weighting            | A standard weighting of the audible frequencies designed to reflect the response of the human       |
|                        | ear to noise.                                                                                       |
| dBA                    | Noise is measured in units called decibels (dB). There are several scales for describing noise, the |
|                        | most common being the 'A-weighted' scale. This attempts to closely approximate the frequency        |
|                        | response of the human ear.                                                                          |
| dB(Z), dB(L)           | Decibels Linear or decibels Z-weighted.                                                             |
| Hertz (Hz)             | The measure of frequency of sound wave oscillations per second - 1 oscillation per second           |
|                        | equals 1 hertz.                                                                                     |
| LA10                   | A noise level which is exceeded 10 % of the time. It is approximately equivalent to the average of  |
|                        | maximum noise levels.                                                                               |
| LA90                   | Commonly referred to as the background noise, this is the level exceeded 90 % of the time.          |
| LAeq                   | The summation of noise over a selected period of time. It is the energy average noise from a        |
|                        | source, and is the equivalent continuous sound pressure level over a given period.                  |
| LAmax                  | The maximum root mean squared (rms) sound pressure level received at the microphone during a        |
|                        | measuring interval.                                                                                 |
| RBL                    | The Rating Background Level (RBL) is an overall single figure background level representing         |
|                        | each assessment period over the whole monitoring period. The RBL is used to determine the           |
|                        | intrusiveness criteria for noise assessment purposes and is the median of the ABL's.                |
| Sound power level (LW) | This is a measure of the total power radiated by a source. The sound power of a source is a         |
|                        | fundamental location of the source and is independent of the surrounding environment. Or a          |
|                        | measure of the energy emitted from a source as sound and is given by:                               |
|                        | = 10.log10 (W/Wo)                                                                                   |
|                        | Where: W is the sound power in watts and Wo is the sound reference power at 10-12 watts.            |

Table A2 provides a list of common noise sources and their typical sound level.

| Table A2 Common Noise Sources and Their Typical Sound | Pressure Levels (SPL), dBA |
|-------------------------------------------------------|----------------------------|
| Source                                                | Typical Sound Level        |
| Threshold of pain                                     | 140                        |
| Jet engine                                            | 130                        |
| Hydraulic hammer                                      | 120                        |
| Chainsaw                                              | 110                        |
| Industrial workshop                                   | 100                        |
| Lawn-mower (operator position)                        | 90                         |
| Heavy traffic (footpath)                              | 80                         |
| Elevated speech                                       | 70                         |
| Typical conversation                                  | 60                         |
| Ambient suburban environment                          | 40                         |
| Ambient rural environment                             | 30                         |
| Bedroom (night with windows closed)                   | 20                         |
| Threshold of hearing                                  | 0                          |
